Sunnyvale, CA | 831.707.5480

## EXPERIENCE

### Presently | Sunnyvale, Ca | Freelance Web Developer

Creating customized websites for companies and individuals. Through communication with clients, I design, and build and maintain company websites for small businesses. Also providing support for Web Hosting, Domain maintenance, and DNS migration.

<https://www.silbermanlaw.com/> - 1 Month Collaboration with Associate at Law Firm

<https://www.leonardsilbermanlaw.com/> - 2.5 Month Collaboration with Owner of Law Firm

<http://www.returntoworksolutions.com/> | <http://rehab90.com> - 3 Week Project

### Aug 2015 - Jan 2018 | Portland, OR | Web Design & Development “Software Engineer - UI/UX Team”

#### Exterro, Inc

- Built responsive, single-page web-applications for a litigation and e-discovery product suite. Our team was responsible for designing, wireframing, and prototyping new features and layouts from the ground up- or in some cases, from existing designs, updating the company’s flagship “4.0” product suite to their latest “5.0” iteration of products.
- Researched and selected third party JavaScript Plugins such as Select2.js, Handlebars.js, D3.js, etc. and implemented them when necessary.
- Created wireframes and working prototypes using InVision in order to receive feedback from other team members and stakeholders.
- Coded the designs from InVision into HTML5, CSS, and JavaScript, ultimately making working prototypes to be later used in the web application.
- Worked on 12+ different complex web application modules within Exterro’s product suite, having designed, prototyped, and with my team, coded every aspect of the look and feel, or front-end, of the nearly the entire application suite.
- Refactored existing code and designs, in order to update the UX of the product to modern standards. Worked through the entire product lifecycle from scrum, to sketching, to designs, wireframes, and ultimately the actual coding of the designs.
- Performed usability studies in order to get a better understanding of who would be using the product and how best to design specific features.
- Performed DOM Manipulation using HTML and JavaScript to manipulate elements within the DOM. Experience with CSS animations and transitions to add flare to certain elements.

## OTHER EXPERIENCE

### May 2015 - Aug 2015 | Los Angeles, CA | Systems Support - IT Dept

#### USCB America

- Data manipulation, scheduling, running event procedures to encrypt/decrypt and place or retrieve items from FTP servers. Developed standards for WFL scripting and COBOL for in-house mainframe. Created and delivered business intel reports and deliverables.

### March 2013 - May 2015 | Orange, CA | In-House I.T. Manager & Accounts Manager

#### Silberman Law Offices, LLP

- Designed, wrote HTML, CSS, and JavaScript, and deployed company website. Maintained company database and created new database modules for internal company use. Managed accounts receivable. Trained law clerks on how to perform tasks related to essential operations.
